DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 13, 14, 18, 19, 21 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Pohl et al. '630.

Pohl et al. discloses a turbine rotor for a hand held tool comprising: a rotor body having an inlet attachable to a high pressure air source including: a first annular chamber (17), a second annular chamber (31), a common inner wall, wherein the first annular chamber and the second annular chamber are separated by the common inner wall, the rotor body being cylindrical and including a plurality of tangential peripheral nozzles (16) in fluid communication with the first and second chambers for expelling high pressure air to rotate the rotor body, the inner wall including a central bore for receiving an attachment to a drive shaft (7); a rotor body including a central bore, and the rotor body having a cylindrical outer wall and a central inner wall, a front surface including at least one first arcuate channel ending in at least one first circumferential opening, and a back surface including at least one second annular channel ending in at least one second arcuate channel ending in at least one second circumferential opening; air passes in each chamber, the air passage ending in tangential nozzles in the outer wall of the rotor, the nozzles directing a pressurized fluid therefrom to impart rotation to the turbine rotor; means for generating torque in a first chamber of the body, means for generating torque in the second chamber of the body, means for separating the first chamber from the second chamber, and means for connecting the torque generating means to a shaft; and a governing means for governing the revolutions per minute of the rotor disposed within the first means for generating torque and the second means for generating torque.

Art Unit: 3723

Allowable Subject Matter

Claims 2-12, 15, 16 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 17 is allowed.
